TEXT:

...electronic commerce security (C)1994-98 M2 COMMUNICATIONS LTD
RDATE:060798 What makes an electronic *transaction* truly secure? Four elements must surely be satisfied: 1) no-one apart from the communicating parties can read the details of the *transaction* (this is confidentiality). 2) no-one can tamper with the details of the *transaction* en route (integrity). 3) both communicating parties can positively identify each other (authentication). 4) evidence that a specific *transaction* has taken place can be provided, so that neither party can deny it (non-repudiation...)

...PIN used in a bank machine, except that it should be at least 90 bits (*binary* digits) long. The recipient can decode it either with the same key (symmetric encryption) or...

...attached to it. This is a guarantee from a Trusted Third Party that a public *key* belongs to a *particular* person or organisation. It will be issued after a conventional check, for example an examination...

...to prove that you sent the message. Non-repudiation means that as soon as the *transaction* is complete and is confirmed as acceptable, an "evidence token" is automatically generated and sent to a third party, likely to be a CA. The *token*, which says what *transaction* was done and when,
